Portfolio

Ivanel Pérez Bolívar

Latest projects

Based in Belgium, working globally.

What you will find
inside?

#1 Cases showing how I helped organisations define user experiences grounded in research and data with positive business impact.

1.1 New digital platform. States of Guernsey - *2025-Current*

1.2 HMI Redesigns. IBA Industrial. 2023-2024

1.3 AI-driven platform for Pharma Marketers. Aktana. 2023

1.4 Sales portal for Seeds. Corteva Agriculture. 2022-2023

1.5 Website & App. Etihad Airlines. 2024

1.6 Website Factory. Compagnie des Alpes. 2023-2024

1.7 Visit.Brussels. Digital Ecosystem. 2022-2023

#2. Training around Design Thinking and Jobs-to-be-done – key disciplines applied in my projects.

2.1 Design Thinking for Data Scientists. Stada 2024

2.2 Jobs to be done to Marketeers. De Heus. 2024

Please keep this
information **strictly**
confidential.

Role in Program: Lead Experience Designer & Content Strategist

The Ask: Design and deliver the new content strategy for the public site (gov.gg), as well as designing the new journeys for the digital services.

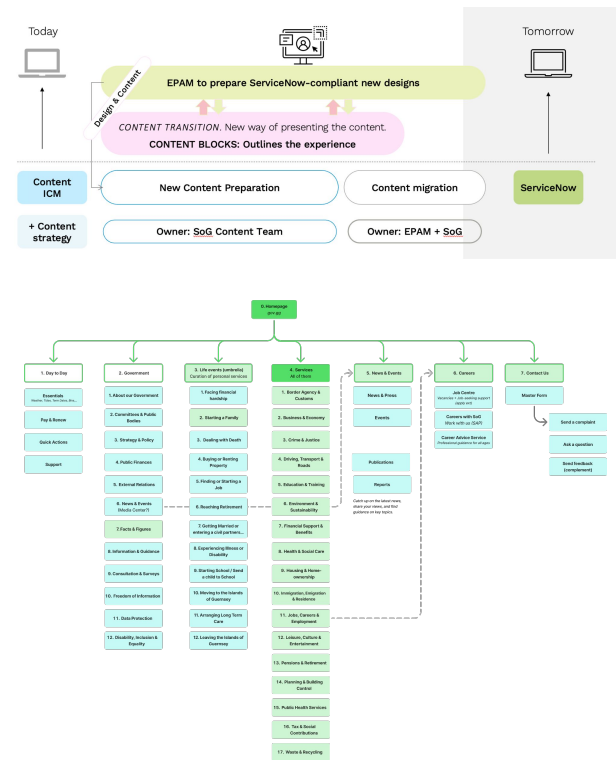

Main Goal: Simplify the way people access, read, and interact with the government services teams.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset:** Alignment.

The biggest challenges:

1. The chosen platform is not a common CMS, so we need to optimise as much as possible our proposals to be able to deliver the full content without compromising the experience.
2. The complex stakeholders management ecosystem, having to interact with +15 services teams to align everyone on the design direction and outcome (journeys)
3. There is a massive content migration, so we are working carefully on the new information architecture to avoid broken journeys for the launch (2026)
4. Along the migration, there is a new tone of voice. We are preparing the client to apply AI to speed up this process, but keeping the content team on the lead (humans on the loop).

Designs are confidential, but during a call I can share more about the project.

1.2 IBA Industrial: HMI Redesign(s) ^{1/4}

Period Covered: 2023–2024* - Projects: Beagle & Rhodotron.

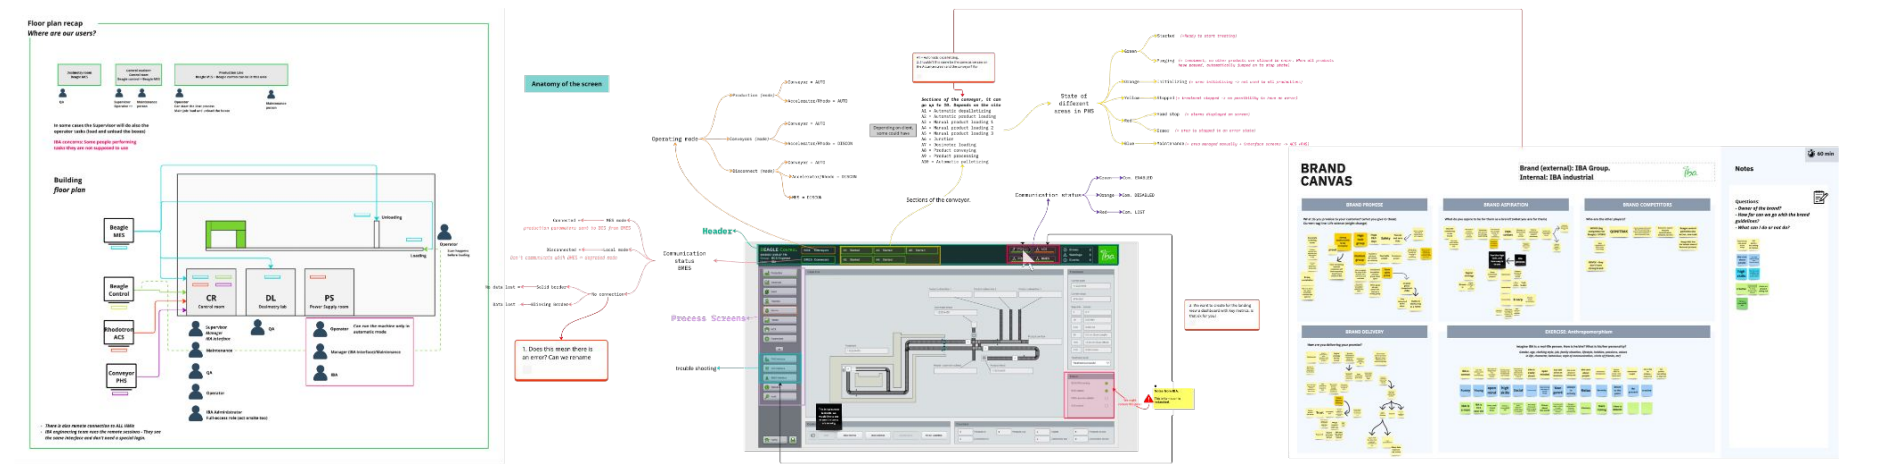

Role in Program: Lead Experience Designer & Information Architecture

The Client: IBA designs, produces solutions for the diagnosis and treatment of cancer and other serious illnesses, and for industrial applications such as the sterilization of medical devices.

The Aks: Update their Industrial HMI (Human–Interface–Machines) applications. Interfaces that monitor and operate the production line of their Irradiation Centers (Beagle system). Later, we added the HMI for the machine that produces the irradiation. (Rhodotron)

Main Goal: Simplify and modernise their current interfaces, creating user–friendly and efficient designs that reflect their brand values.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset:** Product vision and rethinking their engineering operations.

1.2 IBA Industrial: HMI Redesign(s) ^{2/4}

Period Covered: 2023–2024*

Role in Program: Lead Experience Designer & Information Architecture

The biggest challenges:

1. HMIs varied by different site installations, causing many disparities in user documentation (manuals)
2. Engineers were spending an exhaustive time to prepare customer trainings (each site is different)
3. IBA had three different products for three different process – operation was siloed by design (but we fix it!)
4. Some solutions were sold separately (optional) but we managed to bring them together as a full suite, making it more attractive as a product for customers.

How did we tackle this project?

1. During strategic workshops with the engineering and marketing team, we gather a deep understanding of their business, their brand, their users, their operations, and the current state of their human–machine interfaces (HMI).
2. We deep-dive on how engineers were troubleshooting today, and their main issues. And also we envisioned how do they wanted the radiation site to operate. Defining new roles, tasks, and designing the right screens and flows for each of them.
3. As a design team we had to learn and understanding how the irradiation process worked to map the desired future for smart, user-friendly, and intuitive HMIs.

* Currently we are also redesigning two more software applications, for two other business units: Chemistry software and radiopharma.

1.2 IBA Industrial: HMI Redesign(s)^{3/4}

Period Covered: 2023–2024*

Role in Program: Lead Experience Designer & Information Architecture

Final design sneak peak:

A modern & smart interface to operate IBA Irradiation facilities.

1. **Integrated system.** We challenged their status quo and business operation by bringing together Beagle Control and MES capabilities with a real-time view of the ongoing process(es) on the line.
2. **Defined an efficient hub from monitoring to production**, all-in-one, benefiting their sales strategy.
3. **Designed a smart system** with an intuitive experience based on role access control.
4. **Branded sound system** with tailor-made sounds for system initiation, alarms, and warnings.

I directed the UX - not the UI Design phase.

1.2 IBA Industrial: HMI Redesign(s) ^{4/4}

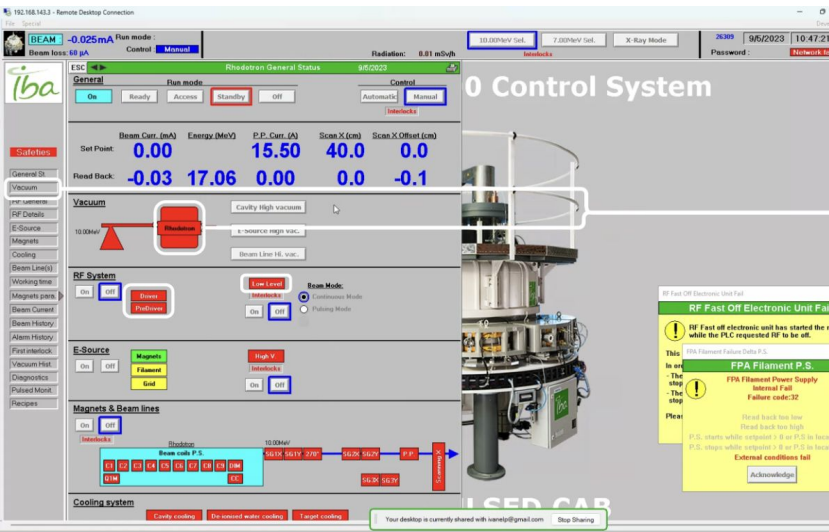

Period Covered: 2023-2024*

Role in Program: Lead Experience Designer & Information Architecture

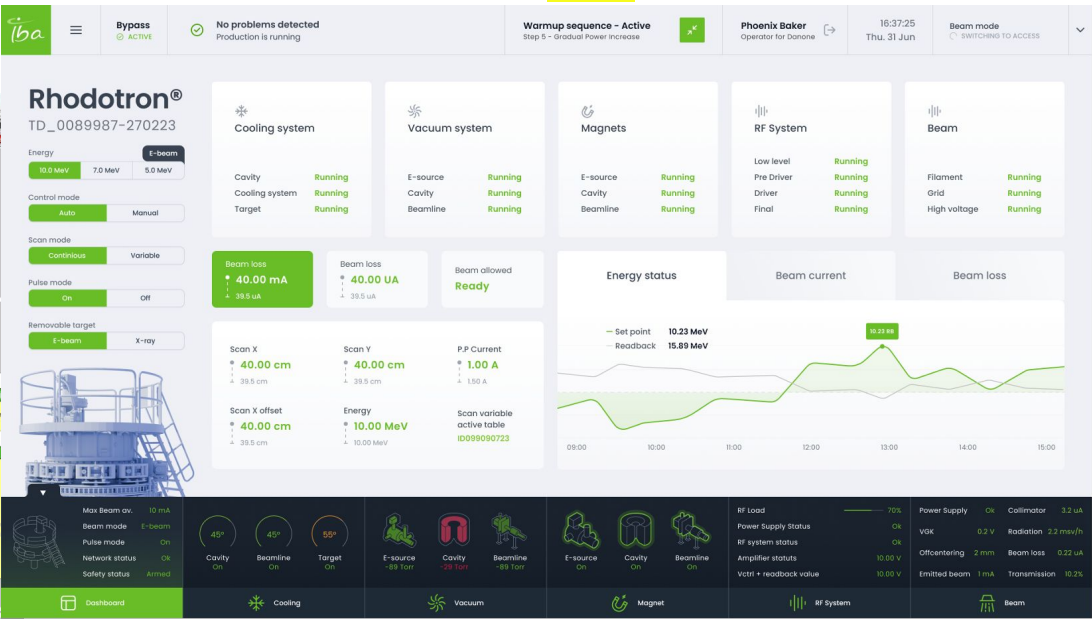

Rhodotron HMI. The biggest challenge for this project was to rethink the navigation, calibration and troubleshooting of the rhodotron subsystems. I designed the new Information Architecture sustaining the vision.

This has been one of the most rewarding professional experiences of my career.

BEFORE

AFTER

1.3 Aktana: AI-driven platform for Pharma Marketers

Period Covered: 2023

Role in Program: Lead Experience Designer & Information Architecture

The Ask: Redesign and create two prototypes to illustrate the vision for their new Field Control Center & Omnichannel control centre – applications that were used by internal teams to set up marketing strategies for pharma and biotech companies.

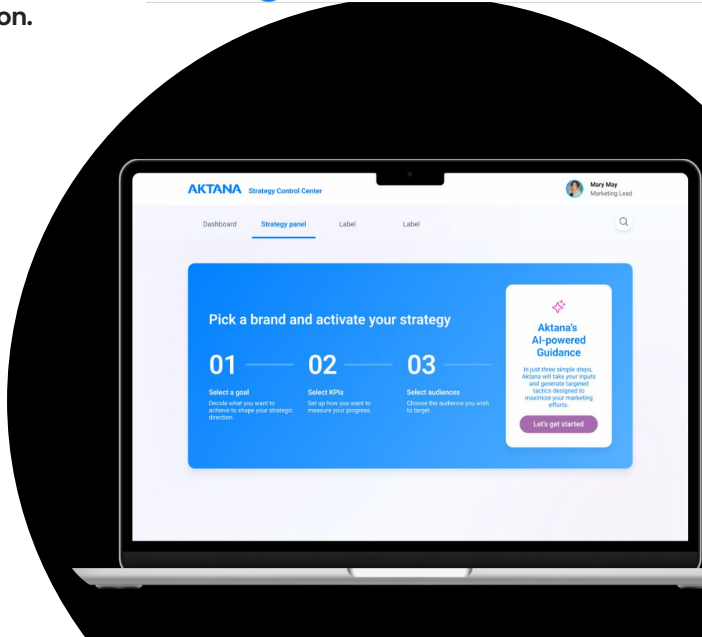

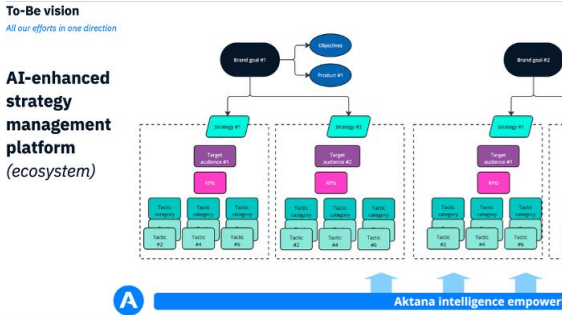

Main Goal: Transform and simplify these AI internal tools to be a SaaS client-facing platform.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset:** Product vision.

The biggest challenges:

- 1. Aktana wanted a product for external users (clients). This required creating a unified experience for all modules into one product. A product that was easy to understand, operate and scale. That is how the Strategy Control Centre was created.
- 2. We could have separate modules backstage, e.g., Audience Builder, Journey Creator, Config Panel, etc., but the goal was to provide a cohesive and intuitive “front-stage” experience.
- 3. Evaluate our product vision and design experience with Aktana data scientists to understand how to shape and modify their algorithms.

Client evolved the designs with a prebuilt UI kit and EPAM assisted with implementation.

1.4 Corteva Agriculture: Sales portal for Seeds^{1/2}

Period Covered: 2023

Role in Program: Lead Experience Designer & Information Architecture

The Client: Corteva agriculture offer farmers a comprehensive and diverse portfolio, from crop protection as fungicides, herbicides, insecticides, and seed treatments that protect against weeds, disease, and insects —to seeds.

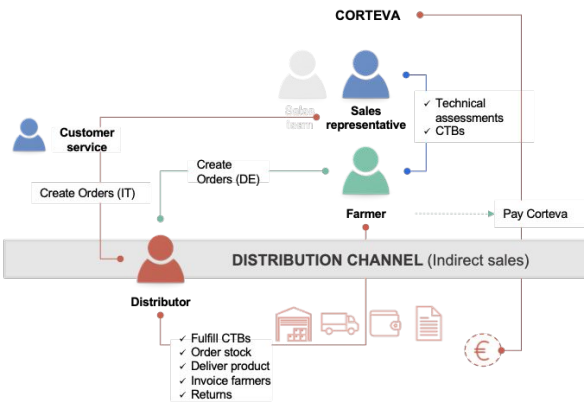

The Ask: Create a new B2B Sales portal for Seeds. Evaluating along the way how to onboard different countries in this platform taking into account they all were selling seeds in a different way.

Main Goal: Design and deliver the new platform before the EoL of the existing solution.

Deliverables: UX Strategy & Direction, User flows / **Intangible asset:** Rethinking how to sell.

The biggest challenges:

- 1. After conducting workshops with Italy and Germany, we identified that their processes and systems were too different to transition to a unified platform immediately.
- 2. Germany supported the sale process on distributors while in Italy the sales process was heavily managed by technicians visiting the farmers. Plus, the sales process was rooted in the harvest season and involved many offline touchpoints.
- 3. We managed to find a way to create a role-system platform working for both countries, and eventually ready to onboard UK, Spain, the Czech Republic and Austria.

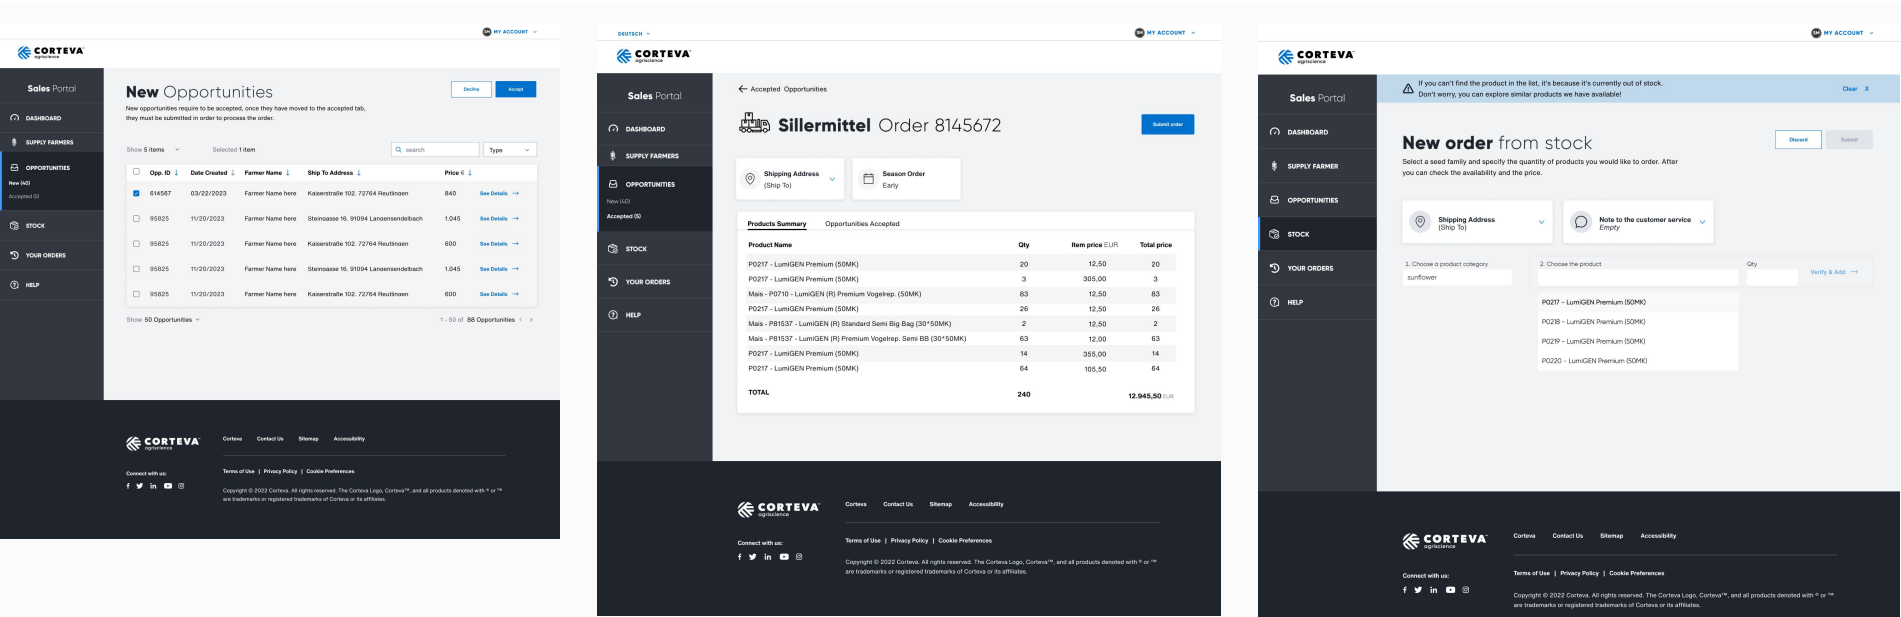

1.4 Corteva Agriculture: Sales portal for Seeds^{2/2}

Period Covered: 2023

Role in Program: Lead Experience Designer & Information Architecture

Final design sneak peak:

- 1. A unified platform and sales operation for the German team
- 2. One single platform for all users: Distributors and Sales representatives
- 3. Strong foundation to evolve the platform and roll-out to other countries

1.5 Etihad Airlines: Website & Mobile App^{1/2}

Period Covered: 2023

Role in Program: Lead Experience Designer & Information Architecture

The Client: Etihad Airways, the national carrier of the UAE, operating 1,000+ flights weekly to 120 global destinations.

The Ask: Conduct a full review and redesign of their digital ecosystem: iOS and Android apps, responsive websites, and a seamless integration (design and content) of the loyalty platform.

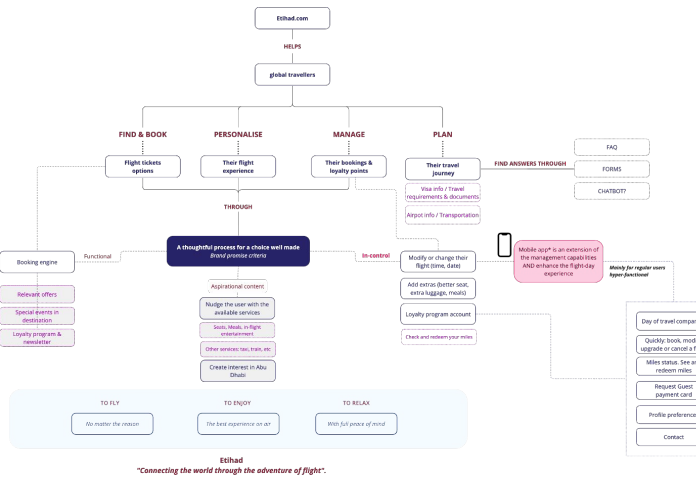

Main Goal: Create an innovative, industry-leading, and high-performing digital ecosystem that elevates the customer experience, improving the navigation and the customer profile journey.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset:** Product vision and stakeholder alignment.

The biggest challenges:

- 1. Etihad’s leadership was hesitant about upfront research, but we manage to persuade them with unmoderated testing, especially for the new information architecture.
- 2. Separate business and technical product managers created complexity in decision-making
- 3. Massive information architecture to simplify, new tone of voice, and the bad practice of landing pages to fix (campaigns)
- 4. Integration and simplification of an overly complex loyalty program –as part of the new profile.

1. Product Concept Map

1.6 Compagnie des Alpes: Website Factory^{1/2}

Period Covered: 2023-2024

Role in Program: Lead Experience Designer & Information Architecture

The Client: Compagnie des Alpes is a leading European company in the leisure industry, operating major ski resorts in the French Alps (La Plagne, Les Arcs, Tignes, Val d’Isère) and numerous well-known theme and amusement parks across Europe, including Parc Astérix and the Walibi parks.

The Ask: Define, design, and build the “Easy Factory”: a modular, scalable, and powerful CMS to unify websites and mobile apps for eight of their theme parks.

Main Goal: Preserve each park identity and sales approach in both: websites and mobile apps.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset:** Alignment.

The biggest challenges:

1. Align eight different parks (around 13 stakeholders) under a shared strategy while respecting brand, market, culture, and language differences.
2. Scope our design sprints in coordination with the development team to sync integration work with designs, while elevating the digital experience and optimising our resources.
3. Design approval flow was intense. We had to confirm initial UX direction and vision for each park, to move fast to UI design where each park identity was applied.
4. Keeping the rhythm of highly-synched multidisciplinary sprints under tight timelines (8 weeks strategy/research, 12 weeks design, 20 weeks development)

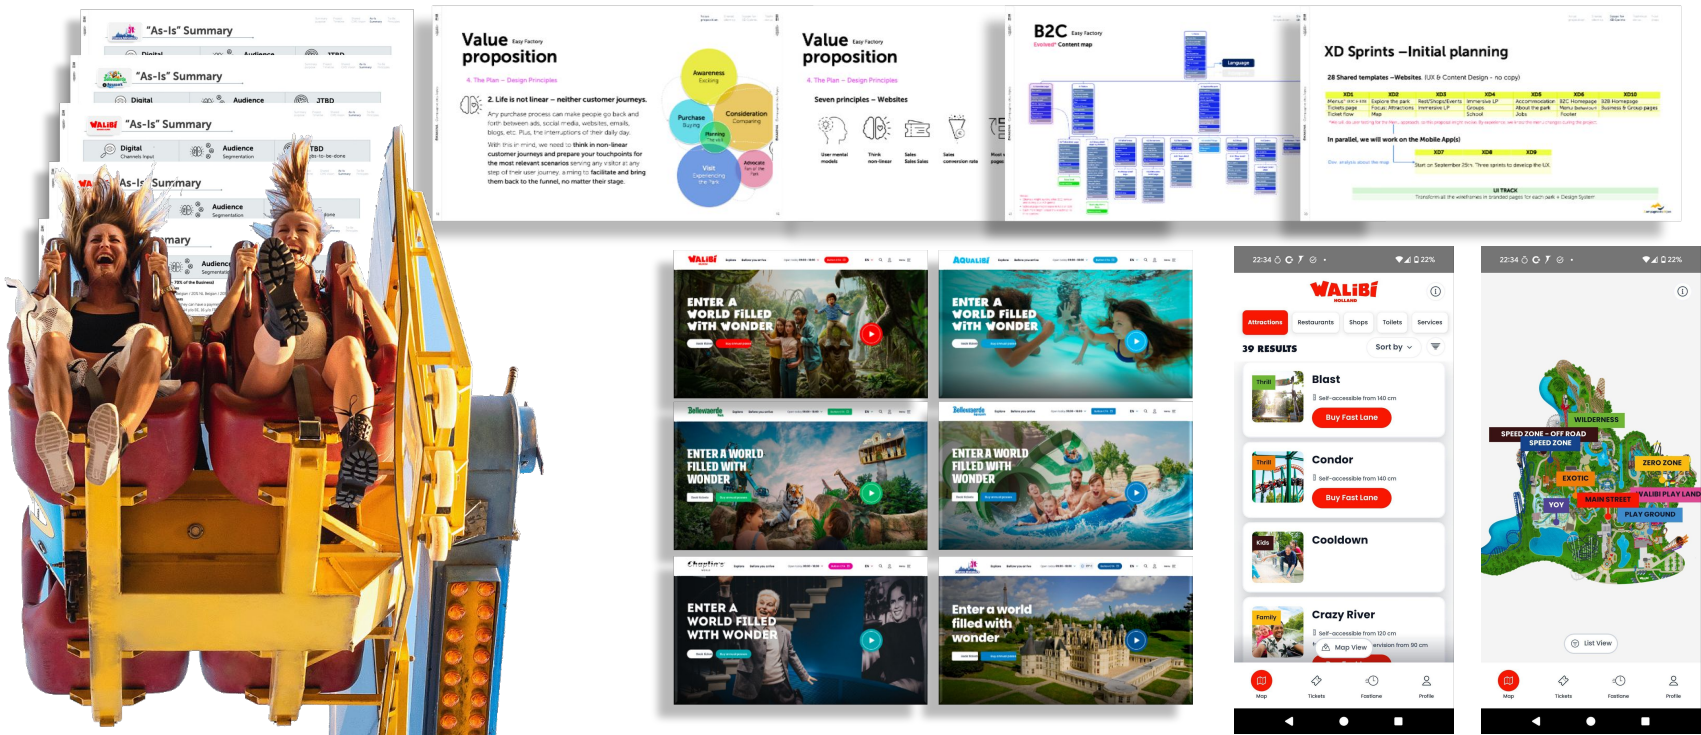

1.6 Compagnie des Alpes: Website Factory 2/2

Period Covered: 2023-2024

Role in Program: Lead Experience Designer & Information Architecture

From initial workshops, to research, and strategy - to design and development. It all felt like a rollercoaster!

+ 8 sites

+ Events microsites

+ 4 mobile App

1.7 Visit.Brussels: New digital ecosystem ^{1/2}

Period Covered: 2023–2024

Role in Program: Lead Experience Designer & Information Architecture

The Client: visit.brussels — the official Brussels tourism agency and convention bureau, representing the city’s cultural, business, and hospitality sectors.

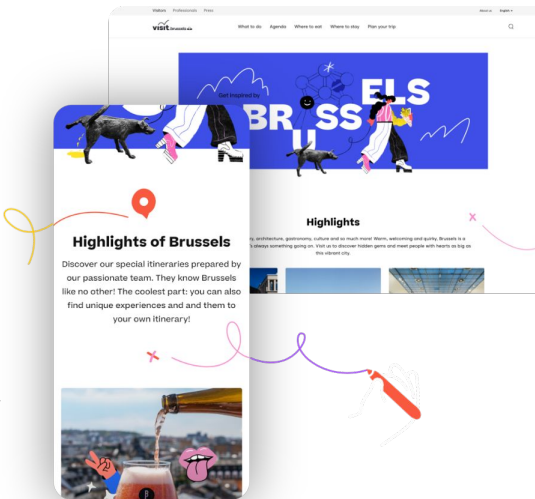

The Ask: Reimagine the city’s digital ecosystem by merging 50+ B2B and B2C websites into one unified platform. Crafting distinct user journeys for tourists/locals, professionals, and journalists.

Main Goal: Support the city’s rebranding with a digital experience that reflects Brussels’ vibrant, multicultural, and modern identity.

Deliverables: UX Strategy & Direction, User flows, Content Strategy / **Intangible asset: Product vision and Alignment.**

The biggest challenges:

- 1. Consolidating a fragmented ecosystem of 50+ websites into one coherent platform = one information architecture.
- 2. Working with the B2C and B2B teams, aligning more than 12 teams and 20 people, in our design direction, decisions making and proposals.
- 3. Serving very different audiences (tourists, locals, businesses, journalists) with tailored **yet** connected journeys.
- 4. Capturing the “soul of Brussels” (playful, artistic, cosmopolitan) while delivering a robust CMS & CRM solution.

1.7 Visit.Brussels: New digital ecosystem 2/2

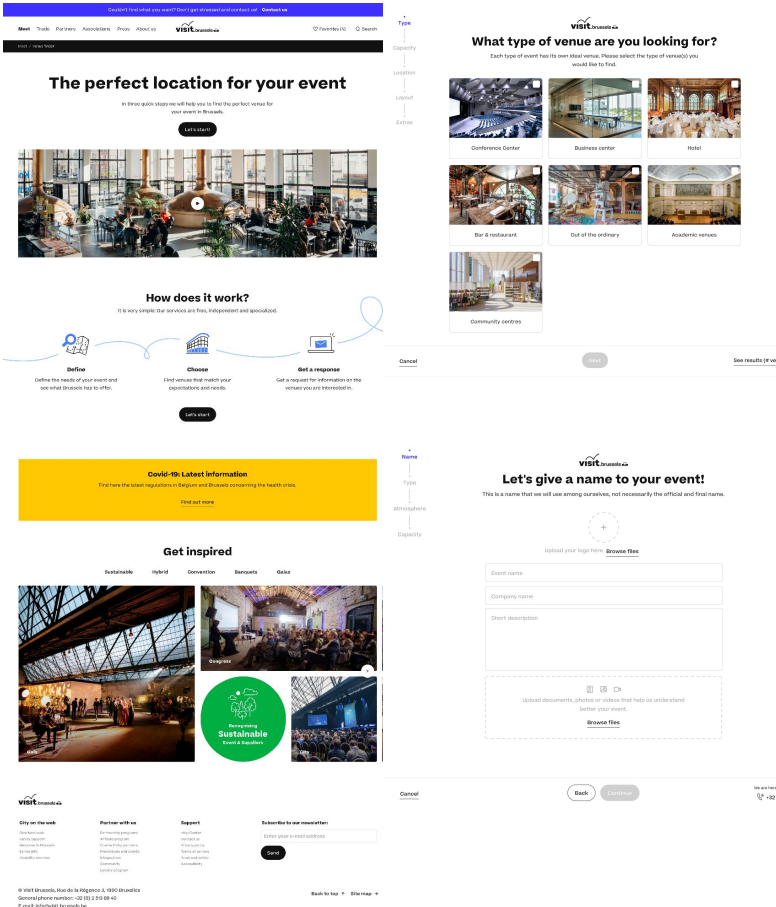

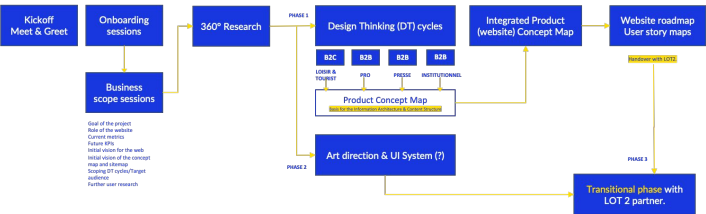

Period Covered: 2023–2024

Role in Program: Lead Experience Designer & Information Architecture

How did we tackle this project?

- 1. We perform several design thinking cycles, including user research and testing to confirm the pain points and validate we were addressing them in the right way with our ux proposals. More than 50 face-to-face sessions were conducted, among B2C and B2B users.
- 2. A big piece of this project was to simplify 50 sites, so treejack testing to validate the new sitemap were also conducted.
- 3. The client was very keen to apply a proper design approach for the new ecosystem.

2.1 Stada: Design Thinking for Data Scientists

Period Covered: 2024

Role in Program: Experience Design Strategist & Service Designer

The Client: Stada is a German pharmaceutical company headquartered in Bad Vilbel, specializing in consumer healthcare (OTC), generic pharmaceuticals, and specialty medicines.

Main Goal:

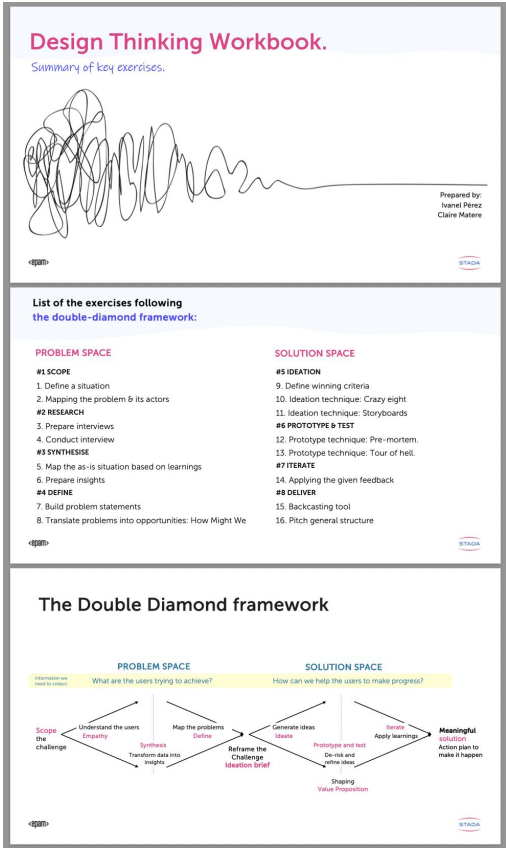

- Train a selected group of 40 employees across two locations (Serbia and Germany).
- Build skills in empathy and problem-solving methodologies, enabling technical roles to collaborate more effectively with business roles in a data-led content context.

Deliverables:

- Interactive trainings. And a practical workbook to support learning and application.

The biggest challenges:

- Navigating two different cultural approaches across Serbia and Germany.
- Creating a shared framework of empathy relevant to diverse business contexts.

2.2 De Heus: Jobs to be done for Marketeers

Period Covered: 2024

Role in Program: Experience Design Strategist & Service Designer

The Client: De Heus is a global animal nutrition company, partnering with farmers worldwide to provide sustainable feed and farming solutions.

Main Goal: Train the global marketing team in Jobs-to-be-Done (JTBD) to be able to conduct more insightful interviews, identifying real farmer needs in Africa.

Deliverables:

- JTBD training sessions and active listening workshops.
- Live demonstration interviews, followed by guided practice in the field.

The biggest challenges:

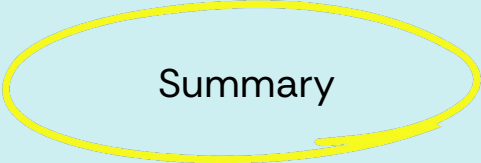

- Shifting marketeers' mindset from selling products to active listening and understanding farmers' broader ecosystem.
- Supporting teams during their first JTBD interviews in two African countries, overcoming cultural and communication barriers.

One of the biggest insights we collected was the opportunity to enable local farmers growth with mentoring and networking.

Cultivating Growth Training Program

A modular approach to empower De Heus Business Units in gathering and applying customer insights to improve their business and brand propositions.

Summary

My Approach & Methods

- Design Thinking methodology to frame problems and explore solutions.
- Double Diamond framework to guide discovery, definition, design, and delivery.
- Jobs-to-be-Done technique to understand real user needs and decision drivers.
- Content & Information Design (information architecture) for clarity and usability.
- Service Design to align people, processes, and touch-points across journeys.
- Emotional Intelligence to navigate complex stakeholders and drive collaboration.

My Perspective

Every redesign (website, app, product, service) requires not just new interfaces, but organizational readiness to deliver those journeys. Without adapting operations, even the best designs cannot succeed.

My Value

My unique combination of engineering background with strategic, design, and human-centred skills enables me to lead experience transformation programs that deliver lasting impact.
